

# FeM C3 Streaming and Recording Setup Documentation

Under construction

## Encoding Pipeline

### Recording

- Recording using [BlackMagic Decklink SDI cards](#), a [capture tool](#) and a ffmpeg chain
- Recording is done in fixed length segments for continuous capturing (and not missing any lecture starts) without reaching file system limits

### Marking

- custom FUSE file system providing virtual (no-copy) concat of segments
  - for RawDV: **fuse-vdv** (Code: <http://subversion.fem.tu-ilmenau.de/repository/cccongress/trunk/tools/fuse-vdv/>)
  - for MPEG-TS: **fuse-ts** (Code: <http://subversion.fem.tu-ilmenau.de/repository/cccongress/trunk/tools/fuse-ts/>)
- file system also provides **virtual kdenlive project file** for marking
  - on save, fuse-\* parses new project file and extracts cut marks, remounts new concat file

### Ticket Tracker

- Ticket tracker tracking the state of recording tickets (for each Fahrplan entry) and encoding tickets (for each format)
- PostgreSQL, PHP
- Code: <http://git.fem.tu-ilmenau.de/?p=cccongress.git;a=summary>

### Encoding Cloud

- LiveCD image to boot multiple encoder instances
- Recording segments available via central storage box
- Encoding ticket processing with tracker connection (XML-RPC)
- Code: <http://subversion.fem.tu-ilmenau.de/repository/cccongress/trunk/tools/job-control/>

## Streaming

### Encoding

- each room one RTMP encoder
  - sdi card, capture tool, ffmpeg pipeline
  - multiple data sinks using enhanced tee → **supertee**
  - Code: <http://hg.fem.tu-ilmenau.de/supertee/>,  
<http://subversion.fem.tu-ilmenau.de/repository/cccongress/trunk/tools/sdi-script/>
- each room one WMV encoder
  - sdi card, windows media encoder 9
- each room one slide only encoder
- sdi card, capture tool providing v4l device (video only), motion
- Code: <http://subversion.fem.tu-ilmenau.de/repository/cccongress/trunk/tools/bmd2v4l2/>,  
<http://www.lavrsen.dk/twiki/bin/view/Motion/WebHome>

## Relay

- RTMP and HTTP Relay using Nginx
  - new RTMP relay module for nginx
  - Code: <https://github.com/arut/nginx-rtmp-module>
- WMV relay using Windows Server 200X with Media Services
